1 Overall quality at a glance ⓘ

The following experimental techniques were used to determine the structure:
SOLUTION NMR

The overall completeness of chemical shifts assignment was not calculated.

There are no overall percentile quality scores available for this entry.

The table below summarises the geometric issues observed across the polymeric chains and their fit to the experimental data. The red, orange, yellow and green segments indicate the fraction of residues that contain outliers for >=3, 2, 1 and 0 types of geometric quality criteria. A cyan segment indicates the fraction of residues that are not part of the well-defined cores, and a grey segment represents the fraction of residues that are not modelled. The numeric value for each fraction is indicated below the corresponding segment, with a dot representing fractions <=5%

Mol	Chain	Length	Quality of chain
1	A	55	100%
1	B	55	100%
1	C	55	100%

2 Ensemble composition and analysis ⓘ

This entry contains 1 models. Identification of well-defined residues and clustering analysis are not possible.

3 Entry composition ⓘ

There is only 1 type of molecule in this entry. The entry contains 2562 atoms, of which 1278 are hydrogens and 0 are deuteriums.

- Molecule 1 is a protein called Spike glycoprotein.

Mol	Chain	Residues	Atoms					Trace
1	A	55	Total	C	H	N	O	0
			854	264	426	72	92	
1	B	55	Total	C	H	N	O	0

1	C	55	Total	C	H	N	O	0
			854	264	426	72	92	

There are 6 discrepancies between the modelled and reference sequences:

Chain	Residue	Modelled	Actual	Comment	Reference
A	1	GLY	-	cloning artifact	UNP P59594
A	2	SER	-	cloning artifact	UNP P59594
B	1	GLY	-	cloning artifact	UNP P59594
B	2	SER	-	cloning artifact	UNP P59594
C	1	GLY	-	cloning artifact	UNP P59594
C	2	SER	-	cloning artifact	UNP P59594

4 Residue-property plots ⓘ

These plots are provided for all protein, RNA, DNA and oligosaccharide chains in the entry. The first graphic is the same as shown in the summary in section 1 of this report. The second graphic shows the sequence where residues are colour-coded according to the number of geometric quality criteria for which they contain at least one outlier: green = 0, yellow = 1, orange = 2 and red = 3 or more. Stretches of 2 or more consecutive residues without any outliers are shown as green connectors. Residues which are classified as ill-defined in the NMR ensemble, are shown in cyan with an underline colour-coded according to the previous scheme. Residues which were present in the experimental sample, but not modelled in the final structure are shown in grey.
