

# wwPDB NMR Structure Validation Summary Report (i)

#### Mar 6, 2022 - 04:12 PM EST

PDB ID	:	2RP1
Title	:	Refined solution structure of the PEMV-1 mRNA pseudoknot, regularized av-
		erage structure
Authors	:	Cornish, P.V.; Hennig, M.; Giedroc, D.P.
Deposited on	:	2008-04-25

This is a wwPDB NMR Structure Validation Summary Report for a publicly released PDB entry.

We welcome your comments at *validation@mail.wwpdb.org* A user guide is available at https://www.wwpdb.org/validation/2017/NMRValidationReportHelp with specific help available everywhere you see the (i) symbol.

The following versions of software and data (see references (1)) were used in the production of this report:

MolProbity	:	4.02b-467
Mogul	:	1.8.5 (274361), CSD as541be (2020)
Percentile statistics	:	20191225.v01 (using entries in the PDB archive December 25th 2019)
RCI	:	v_1n_11_5_13_A (Berjanski et al., 2005)
PANAV	:	Wang et al. $(2010)$
ShiftChecker	:	2.27
Ideal geometry (proteins)	:	Engh & Huber $(2001)$
Ideal geometry (DNA, RNA)	:	Parkinson et al. (1996)
Validation Pipeline (wwPDB-VP)	:	2.27

#### Overall quality at a glance (i) 1

The following experimental techniques were used to determine the structure: SOLUTION NMR

The overall completeness of chemical shifts assignment was not calculated.

Percentile scores (ranging between 0-100) for global validation metrics of the entry are shown in the following graphic. The table shows the number of entries on which the scores are based.

Metric	Percentile	Ranks	Value
RNA backbone			0.05
Worse			Better
Percent	ile relative to all structures		
Percent	ile relative to all NMR structures		
Matria	Whole archive	NMR archive	
Metric	(# Entries)	(# Entries)	
RNA backbone	4643	676	

101011 8000180110	1010	010

			a success that a characteristic she is a sould the in
The table below s	summarises the geom	etric issues observed	across the polymeric chains and their
fit to the experim	ental data. The red	l, orange, yellow and	d green segments indicate the fraction
of residues that co	ontain outliers for $>$	=3, 2, 1  and  0  types	s of geometric quality criteria. A cyan
segment indicates	the fraction of residu	es that are not part o	of the well-defined cores, and a grey seg-
ment represents th	ne fraction of residues	that are not modelle	ed. The numeric value for each fraction
is indicated below	the corresponding se	egment, with a dot r	epresenting fractions $<=5\%$

Mol	Chain	Length	Quality of chain
1	Δ	27	100%
T	A	21	100%

### 2 Ensemble composition and analysis (i)

This entry contains 1 models. Identification of well-defined residues and clustering analysis are not possible.

### 3 Entry composition (i)

There is only 1 type of molecule in this entry. The entry contains 871 atoms, of which 294 are hydrogens and 0 are deuteriums.

• Molecule 1 is a RNA chain called PEMV-1 mRNA pseudoknot.

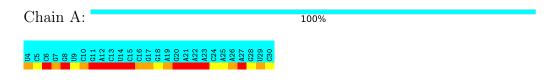

Mol	Chain	Residues			Ator	ns			Trace
1	Δ	27	Total	С	Н	Ν	0	Р	0
	A	21	871	258	294	107	185	27	0

### 4 Residue-property plots (i)

These plots are provided for all protein, RNA, DNA and oligosaccharide chains in the entry. The first graphic is the same as shown in the summary in section 1 of this report. The second graphic shows the sequence where residues are colour-coded according to the number of geometric quality criteria for which they contain at least one outlier: green = 0, yellow = 1, orange = 2 and red = 3 or more. Stretches of 2 or more consecutive residues without any outliers are shown as green connectors. Residues which are classified as ill-defined in the NMR ensemble, are shown in cyan with an underline colour-coded according to the previous scheme. Residues which were present in the experimental sample, but not modelled in the final structure are shown in grey.

• Molecule 1: PEMV-1 mRNA pseudoknot

# 5 Refinement protocol and experimental data overview (i)

The models were refined using the following method: *simulated annealing*.

Of the 28 calculated structures, 1 were deposited, based on the following criterion: *structures with the lowest energy*.

The following table shows the software used for structure solution, optimisation and refinement.

Software name	Classification	Version
X-PLOR NIH	refinement	

No chemical shift data was provided.

# 6 Model quality (i)

### 6.1 Standard geometry (i)

Bond lengths and bond angles in the following residue types are not validated in this section: CH

There are no covalent bond-length or bond-angle outliers.

There are no bond-length outliers.

There are no bond-angle outliers.

There are no chirality outliers.

There are no planarity outliers.

#### 6.2 Too-close contacts (i)

In the following table, the Non-H and H(model) columns list the number of non-hydrogen atoms and hydrogen atoms in each chain respectively. The H(added) column lists the number of hydrogen atoms added and optimized by MolProbity. The Clashes column lists the number of clashes averaged over the ensemble.

Mol	Chain	Non-H	H(model)	H(added)	Clashes
1	А	0	0	0	0
All	All	0	0	0	-

The all-atom clash score is defined as the number of clashes found per 1000 atoms (including hydrogen atoms). The all-atom clash score for this structure is -.

There are no clashes.

#### 6.3 Torsion angles (i)

#### 6.3.1 Protein backbone (i)

There are no protein molecules in this entry.

#### 6.3.2 Protein sidechains (i)

There are no protein molecules in this entry.

#### 6.3.3 RNA (i)

Mol	Chain	Analysed	Backbone Outliers	Pucker Outliers	Suiteness
1	А	25/27~(93%)	15 (60%)	6 (24%)	0.05
All	All	25/27~(93%)	15 (60%)	6 (24%)	0.05

The overall RNA backbone suiteness is 0.05.

5 of 15 RNA backbone outliers are listed below:

Mol	Chain	Res	Type
1	А	6	С
1	А	8	G
1	А	11	G
1	А	12	А
1	А	14	U

5 of 6 RNA p	ucker outliers	are listed	below:

Mol	Chain	Res	Type
1	А	11	G
1	А	12	А
1	А	13	С
1	А	20	G
1	А	21	А

### 6.4 Non-standard residues in protein, DNA, RNA chains (i)

1 non-standard protein/DNA/RNA residue is modelled in this entry.

In the following table, the Counts columns list the number of bonds for which Mogul statistics could be retrieved, the number of bonds that are observed in the model and the number of bonds that are defined in the chemical component dictionary. The Link column lists molecule types, if any, to which the group is linked. The Z score for a bond length is the number of standard deviations the observed value is removed from the expected value. A bond length with |Z| > 2 is considered an outlier worth inspection. RMSZ is the average root-mean-square of all Z scores of the bond lengths.

Mol	Type	Chain	Res	Link	Bond lengths		
					Counts	RMSZ	#Z>2
1	CH	А	10	1	$15,\!21,\!22$	1.08	2 (13%)

In the following table, the Counts columns list the number of angles for which Mogul statistics could be retrieved, the number of angles that are observed in the model and the number of angles that are defined in the chemical component dictionary. The Link column lists molecule types, if any, to which the group is linked. The Z score for a bond angle is the number of standard deviations the observed value is removed from the expected value. A bond angle with |Z| > 2 is

considered an outlier worth inspection. RMSZ is the average root-mean-square of all Z scores of the bond angles.

	Mol	Type	Chain	Res	Link	Bond angles		
						Counts	RMSZ	#Z>2
	1	CH	А	10	1	$17,\!30,\!33$	1.84	1 (5%)

In the following table, the Chirals column lists the number of chiral outliers, the number of chiral centers analysed, the number of these observed in the model and the number defined in the chemical component dictionary. Similar counts are reported in the Torsion and Rings columns. '-' means no outliers of that kind were identified.

Mol	Type	Chain	Res	Link	Chirals	Torsions	Rings
1	CH	А	10	1	-	$0,\!5,\!25,\!26$	0,2,2,2

All bond outliers are listed below. They are sorted according to the Z-score.

Mol	Chain	Res	Type	Atoms	Ζ	Observed(Å)	Ideal(Å)
1	А	10	CH	O4'-C1'	2.23	1.44	1.41
1	А	10	CH	C6-N1	2.17	1.38	1.35

All angle outliers are listed below.

Mol	Chain	Res	Type	Atoms	Z	$Observed(^{o})$	$Ideal(^{o})$
1	А	10	CH	C4-N3-C2	6.88	123.31	116.34

There are no chirality outliers.

There are no torsion outliers.

There are no ring outliers.

#### 6.5 Carbohydrates (i)

There are no monosaccharides in this entry.

### 6.6 Ligand geometry (i)

There are no ligands in this entry.

#### 6.7 Other polymers (i)

There are no such molecules in this entry.

### 6.8 Polymer linkage issues (i)

There are no chain breaks in this entry.

# 7 Chemical shift validation (i)

No chemical shift data were provided
